

2009 / 2010

Interpretive Guide for Student and School Reports

This *Interpretive Guide* is designed to help you understand and effectively use the PLAN® Student Score Reports, Student Score Labels, Student List Report, Profile Summary Report, Presentation Packet, and Early Intervention Rosters, all of which are provided as a standard service of the PLAN program. Please keep the following cautions in mind:

- The validity of conclusions about student groups depends, in part, on the accuracy of data reported by students at the time of testing (gender, ethnicity, coursework plans, and other personal information), which are not verified by ACT.
- Numerous social, economic, and instructional factors are known to contribute to educational achievement. Relatively few of these factors are represented in these reports. Conclusions about educational programs or policies at your school, based on student achievement, should be supported by information from additional sources.
- In making decisions or drawing conclusions based on differences among groups of students, extreme caution must be employed when the number of students in any group is small. ACT urges extreme caution when interpreting summary results for groups with an N-count of fewer than 25 students because of the instability associated with data from small samples. This is particularly important when the identity of group members can be easily determined and confidentiality is likely to be breached through release of data.
- When sharing PLAN results with others, identify the population represented by the report. For example, conclusions regarding your entire class are appropriate only if all, or nearly all, of your students participated in the program, or you have determined that those who took the test are representative of the class as a whole.

AN OVERVIEW OF THE PLAN PROGRAM

PLAN Tests

PLAN includes four multiple-choice tests—English, Mathematics, Reading, and Science, that last 30, 40, 20, and 25 minutes respectively. PLAN also collects information about students' interests, needs, plans, high school course information, and selected background characteristics. A complete description of the PLAN tests and program components is provided in the *PLAN Test Supervisor's Manual*.

PLAN Score Scale

For each of the four PLAN tests, the number of questions answered correctly is counted to obtain a raw score, which is then converted to a scale score. Scale scores for the four tests and the Composite range from a low of 1 to a high of 32. The two PLAN subscores in English (Usage/Mechanics and Rhetorical Skills) and Mathematics (Pre-Algebra/Algebra and Geometry) are reported on a score scale ranging from a low of 1 to a high of 16. These subscores have been scaled independently from the English and

Mathematics Test scores, so their sums will not necessarily equal the corresponding subject scale scores. Neither are the PLAN subscores on the same score scale as the subscores for EXPLORE® (the ACT 8th- and 9th-grade test).

EXPLORE and PLAN are on a common scale. Although the tests are on a common scale, there are some differences. PLAN is more difficult than EXPLORE in order to assess the greater academic development that may be expected of 10th graders. This is reflected in the different score ranges of the two test batteries. The maximum score allowed on EXPLORE is 25, whereas PLAN testers may score as high as 32. This relationship means that students would be expected to receive the same score on EXPLORE and PLAN if they took both test batteries on the same day. Therefore, when you compare students' EXPLORE scores (most often from 8th or 9th grade) to their PLAN scores (most often from 10th grade), you can interpret an increase directly and confidently as academic growth.

To provide maximum continuity, the results for PLAN and the ACT are also reported on a common score scale with a range of 1–32 for PLAN and a range of 1–36 for the ACT. Each PLAN test score is interpretable as the ACT test score that a student would be expected to achieve if that student had taken the ACT at the time of PLAN testing. No relationship is intended between PLAN and ACT subscores.

PLAN Test Forms

New PLAN forms are equated through special studies so that PLAN scale scores represent the same level of achievement regardless of form. Differences in difficulty across forms may result in maximum scale scores on some tests in some forms of less than 32.

National Norms

ACT conducts national studies in which the PLAN tests are administered to 10th-grade students in schools across the United States. Data from the study are used to create norms for PLAN. The norms reported for PLAN scores are intended to be nationally representative. Visit www.act.org/plan/norms for more information on how to use PLAN norms to interpret student test scores.

Local comparisons to the national norm group are most appropriate when PLAN is administered under conditions similar to those in the norming study—with all four tests administered in a single session in the standard order, and students having calculators available for use on the Mathematics Test.

School Norms Reporting

School norms are provided on the Student Score Reports only for schools that purchase the Enhanced Reporting Package. When school norms are reported, they are printed on the Student Score Report in the column labeled "In Your School."

Student Information

The Student Information Section collects name, gender, birth date, current grade in school, racial/ethnic background, and student identification number. A needs assessment allows students to identify the amount of help they need in each of seven areas of academic and career development. The UNIACT Interest Inventory assesses students' preferences for work-related tasks. The High School Course Information section collects information about the core courses students have taken and plan to take.

Supplemental Items

A Supplemental Item section offers the option of administering up to twelve locally developed questions to collect student information of particular interest to your school or district. Student responses are summarized in Table 7 of the School Profile Summary Report.

Student Planning Guide

Each student who participates in PLAN should receive a planning guide, *Using Your PLAN Results*, which includes an explanation of information reported on the Student Score Report and activities to help students use PLAN results in career and course planning.

STANDARD PLAN REPORTS

Student Score Report

Two copies of each Student Score Report are provided. One copy should be distributed to the student, along with a copy of the student planning guide. The second copy can be retained for school use.

Student Score Labels

Student Score Labels are self-adhesive labels to be affixed to a student's permanent records. Two copies of each Student Score Label are provided.

Student List Report

A list of tested students shows test scores, national cumulative percent, educational plans, career preferences, and estimated ACT Composite score ranges.

Profile Summary Report

A Profile Summary Report is provided for each school testing at least one student in the scoring batch with a valid PLAN Composite score who tested under standard time limits.

Presentation Packet

The Presentation Packet summarizes your school's PLAN results in charts and graphs for easy presentation to groups. It includes three-year trends in your school's average PLAN scores.

Early Intervention Rosters

The Early Intervention Rosters identify students who qualify under three categories. This information can help you to design intervention strategies to assist students to reach their academic and career goals.

ENHANCED REPORTING PACKAGE

The PLAN Enhanced Reporting Package includes all the reports in the Standard Package **plus** the following:

School and District Norms. School and district norms are provided and added to the PLAN student database. All records to be included in a norm group must be submitted to ACT for scoring at the same time.

Research Data File. Files are delivered on CD in both ASCII and CSV formats to provide flexibility for local use. This service provides complete PLAN data on every student tested in your school or district.

Item-Response Summary Report. This report provides tables describing the item-by-item performance of your PLAN examinees. Item response results are categorized by test (e.g., English), by subscore (e.g., Usage/Mechanics), and by content area (e.g., Punctuation) and provide comparisons to other students taking the same test form.

UNDERSTANDING YOUR PLAN STUDENT SCORE REPORTS

Student identification information, needs, and plans and background information shown on the Student Score Report are collected on the PLAN answer folder using the booklet *Instructions for Completing Your Answer Folder*. Students who complete the PLAN tests receive four scores, two subscores in English, two subscores in Mathematics, and a Composite score. For students who have a Composite score, ACT reports an estimated ACT Composite Score Range. Additional information is provided in the *PLAN Test Supervisor's Manual*. All data elements collected during PLAN administration (including test item responses) are included in the student records available on CD for schools that purchased the Enhanced Reporting Package.

Further information about PLAN test scores and national norms is provided in the *PLAN Test Supervisor's Manual* and on the ACT website at www.act.org/plan/norms and www.act.org/plan/pdf/TechManual.pdf. The planning guide, *Using Your PLAN Results*, also provides explanations and suggestions for using PLAN results. ACT has also developed College Readiness Standards, descriptions of the knowledge and skills associated with PLAN scores. The College Readiness Standards for PLAN are presented on pages 5–10 of this *Interpretive Guide*.

UNDERSTANDING YOUR PLAN STUDENT LIST REPORT

How did our students perform on the PLAN tests compared to other students nationally? What are their self-reported educational and career plans?

The PLAN Student List Report lists all tested students in alphabetical order by last name. For each student listed, the roster shows the student-reported

grade level, student identification number, student-reported post–high school educational plans, student-reported preliminary career preferences, and the student’s estimated ACT Composite score range.

Scale scores and national cumulative percents are provided for each test score and subscore.

**UNDERSTANDING YOUR PROFILE
SUMMARY REPORT**

Tables 1a, 1b, and 1c. *How do the PLAN scores and subscores of our students compare with those of other students nationally? Are our students On Track to be college ready when they graduate from high school?*

Table 1a provides your local mean and standard deviation, as well as the distribution of scores for each test and the Composite score. **Table 1b** reports local and national results for English and Mathematics subscores. You can compare your local results to national cumulative percents, means, and standard deviations to determine how your students performed relative to a nationally representative sample of students. Local cumulative percents are based on test scores available from the scoring batch, except those with invalid Composite scores and those achieved under extended time.

Table 1c reports both the local and national percentages of students that fall within each of the College Readiness Standards score ranges and the percentage of students who are on track to be college ready when they graduate from high school.

Table 2. *Do our students’ PLAN scores differ by ethnic and gender group?*

This table reports your local mean scores by gender and racial/ethnic background, as reported by students on their PLAN answer folders, as well as the percentage of students planning to take a college-preparatory core curriculum. Keep in mind that summary results for groups with fewer than 25 students should be interpreted with caution because of the instability associated with data from small samples.

Table 3. *How do our students’ PLAN scores relate to the courses they have taken or are currently taking?*

This table summarizes students’ self-reported coursework taken or currently taking and students’ PLAN test scores. Table 3 also contains PLAN scores for students who are on track for taking the ACT-recommended college core coursework versus those who are not.

Table 4. *How do our students’ PLAN Composite scores and coursework plans relate to their educational plans?*

This table summarizes students’ self-reported educational plans after high school, their coursework plans, and their PLAN Composite scores. Results include the number (frequency) and percentage of your students who selected each educational level. The

table also shows the percentage of students selecting each educational level who also reported plans to complete a college-preparatory core curriculum in high school, and their average PLAN Composite scores. National PLAN Composite score quartiles are reported for all levels. While student plans may be preliminary, this table provides an overview of your students’ aspirations and understanding of educational planning.

Table 5. *How do our students’ PLAN Composite scores and coursework plans relate to their expressed needs for help?*

This table summarizes your students’ self-reported needs for assistance in seven academic and career areas. Percentages are based on the total N shown below the table. The table also shows the percentage of students by need area who also reported plans to complete a college-preparatory core curriculum and their average PLAN Composite score. National PLAN Composite score quartiles are also reported for need areas.

Tables 6a and 6b. *How do our students’ PLAN Composite scores, coursework plans, and postsecondary plans relate to their career preferences from the Career Areas List? How do our students’ PLAN Composite scores, coursework plans, and postsecondary plans relate to their career clusters from the World-of-Work Map?*

Table 6a provides information about your students’ preferences for occupations in 26 general career areas and six career clusters. The information about career preferences comes from students’ answers to Question 9 in the Student Information Section of PLAN.

Table 6b provides information about your students’ interests in six career clusters, based on their responses to the Interest Inventory.

Tables 6a and 6b also show the following information for each career area and career cluster, based on your students who have a preference for/interest in the career area: 1) the percentage of your students who are planning to complete a college-preparatory core curriculum, 2) your students’ educational plans, and 3) your students’ average PLAN Composite scores.

Table 7. *How did our students respond to the local supplemental items in block V?*

This table is provided only if you indicated on your School Header that you administered locally developed supplemental items. Up to twelve items, each with up to six response options (A–F), can be studied.

Note: National normative data are based on students who took all four academic tests within standard time limits as part of a national study. Visit www.act.org/plan/norms for further information about the national norming sample.

UNDERSTANDING YOUR PRESENTATION PACKET

Your Presentation Packet includes full-page, black-and-white graphics (charts) describing your PLAN summary results. The charts are based on local students with valid Composite scores who tested under standard time limits.

Keep in mind that results for groups with fewer than 25 students should be interpreted with caution because of the instability associated with data from small samples.

The packet includes the following charts:

Chart 1. *How does our students' performance compare with that of students in the national norm group?* This chart compares the achievement of students in your schools with that of students nationwide by subject area and Composite scores.

Chart 2. *Are our students achieving similarly across racial/ethnic backgrounds?* This chart includes your local PLAN means by racial/ethnic backgrounds.

Chart 3. *Are our students achieving similarly across gender groups?* This chart includes your local PLAN means by gender group.

Charts 4a through 4e. *How do our students' scores relate to the courses they have taken or are currently taking?* Charts 4a through 4d provide PLAN means and percentages for course sequences that your students have taken or are currently taking. Chart 4e provides PLAN means and percentages for students who intend to take the ACT-recommended college core coursework versus those who do not.

Chart 5. *How do our students differ in their career preferences?* This chart shows the percentages of your students who indicated a preference for one of six possible career areas by their plans to attend either a two-year or a four-year college.

Chart 6. *What percentage of our students reported needing help in particular areas?* This chart shows the percentages of your students who indicated a need for help in up to seven possible areas.

Chart 7. *Is the academic achievement of our students improving?* This chart provides your local mean PLAN scores for the most recent three years, compared to the current PLAN national norms.

Chart 8. *Are our students adequately preparing themselves to be successful?* This chart provides your PLAN means by planned college core coursework for the most recent three years.

UNDERSTANDING YOUR EARLY INTERVENTION ROSTERS

Early Intervention Rosters include lists of students from your school who qualify under three possible categories. The three rosters include the following:

Roster 1. Early Identification. *Which of our students reported that they do not plan to finish high school or have no post-high school educational plans?* Students in this category are listed alphabetically by name with their PLAN scores, their coursework plans, and their educational plans.

Roster 2. Coursework Intervention. *Which of our students' coursework and educational plans are not consistent with their college readiness level?* Students are listed alphabetically by name with their PLAN scores, their coursework plans, their educational plans, and whether or not they are college ready in each content area.

Roster 3. Need For Assistance. *Which of our students expressed a need for help in one or more areas?* Students in this category are listed alphabetically by name with their PLAN scores and selected area(s) of need for which they indicated needing help.

COLLEGE READINESS STANDARDS FOR PLAN

You just received the Student and School Reports for PLAN, and you may be wondering what the test results *really* mean. In other words, what do the test scores on PLAN tell you about *what students are likely to know and to be able to do*?

To help answer these questions, ACT provides information in the form of **College Readiness Standards**. The Standards describe the types of skills and knowledge *typically* demonstrated by students who score in particular score ranges on each test of PLAN. The comments about a student's academic achievement on the Student Score Report are based on these Standards.

What Are College Readiness Standards?

College Readiness Standards are sets of statements that represent widely held learning goals or expectations of what students have learned up to 10th grade that is important for success in high school and beyond. The Standards show how students' skills can progress, becoming increasingly sophisticated from score range to score range. As you review the Standards on pages 7–10, you will note that they address all four academic areas measured in PLAN: English, mathematics, reading, and science. Standards are provided for five score ranges along the PLAN score scale (13–15, 16–19, 20–23, 24–27, and 28–32).

If students in your school obtain a score between 1 and 12, they are most likely *beginning* to develop the knowledge and skills described in the 13–15 score range for that particular PLAN test.

Why Are College Readiness Standards Needed?

The purpose of the Standards is to help high school counselors, classroom teachers, and administrators, as well as students and their parents, to better understand how the scores relate to the kinds of skills needed for success in high school and beyond.

PLAN is a curriculum-based assessment, which means that it measures what students can do with what they have learned. PLAN is designed to measure students’ development of knowledge and skills in the same four academic areas as EXPLORE and the ACT® (ACT’s 8th-/9th- and 11th-/12th-grade assessments, respectively). The knowledge and skills measured by these assessments differ in sophistication and complexity from grade 8 to grade 12. So, the Standards serve as a direct link between what students have learned and what is being taught in the classroom.

How Should the College Readiness Standards Be Interpreted and Used?

The Standards provide a list of statements that describe what students are *likely* to know and to be able to do if they score in specific score ranges. The Standards are cumulative, which means that if students score, for example, in the 16–19 range on the English Test, they are likely to demonstrate most or all of the skills and understandings in the 13–15 and 16–19 score ranges. Students can use the Standards to help select courses to take in high school based on the types of knowledge and skills they will need to develop to be prepared for the future.

Because no one test form measures all of the knowledge and skills included in any particular Standard, the Standards must be interpreted as skills and knowledge that *most* students who score in a particular score range are *likely* to be able to demonstrate. Since there were very few items in the lowest range that were answered by 80% or more of the students, the Standards in this range should be interpreted cautiously. Students who obtain scaled scores of 12 or below are in the process of developing the knowledge and skills described in the 13–15 score range, but they may not as yet be able to demonstrate consistent achievement of them.

It is important to remember that PLAN does not measure *everything* students have learned in middle school or junior high, nor does any particular form of this test measure *everything* necessary for students to know to be successful in high school. PLAN includes a wide range of knowledge and skills that has been judged to be important for success in high school and beyond. So, the College Readiness Standards should be interpreted in a responsible way and be used together with other information about students’ knowledge and skills to better understand what they will need to be successful in high school and beyond.

COLLEGE READINESS BENCHMARK SCORES

ACT has identified scores for each of the four PLAN tests—English, Mathematics, Reading, and Science—that indicate students’ probable readiness for college-level work by the time they graduate from high school. Below is a set of benchmark scores for students who take PLAN in grade 10 (see table). This information can be used to help students improve their academic readiness for college-level work.

TEST	PLAN BENCHMARK SCORE
	Grade 10
English	15
Mathematics	19
Reading	17
Science	21

Tenth-grade students now scoring at or above the PLAN English benchmark score (15) are likely on track to develop the skills necessary to succeed in a college English composition course; 10th-grade students scoring at or above the PLAN Mathematics benchmark score (19) similarly are likely on track to develop the skills necessary to succeed in an entry-level college algebra course; and 10th-grade students scoring at or above the PLAN Reading benchmark score (17) are likely on track to develop the skills necessary to succeed in college social science courses. Tenth-grade students scoring at or above the PLAN Science benchmark score (21) are likely on track to develop the skills necessary to succeed in an introductory college-level biology course. This predictability assumes the student will continue to demonstrate the same level of academic achievement that has been exhibited up to this point. College Readiness Benchmark Scores are also available for EXPLORE and the ACT.

College Readiness Benchmark Scores are based on the actual performance of ACT-tested students in first-year college courses (English Composition, College Algebra, Social Science courses, and College Biology). ACT College Readiness Benchmark Scores were established to correspond to a 50 percent likelihood that students attaining these scores would achieve a grade of B or better in these courses. Then, EXPLORE College Readiness Benchmark Scores were identified at grades 8 and 9, and PLAN College Readiness Benchmark Scores were identified at grade 10, that reflected a strong likelihood that students would meet the ACT benchmark scores by the time they graduated from high school.

College Readiness Standards for PLAN

College Readiness Standards — English

Score Range	Topic Development in Terms of Purpose and Focus	Organization, Unity, and Coherence	Word Choice in Terms of Style, Tone, Clarity, and Economy	Sentence Structure and Formation	Conventions of Usage	Conventions of Punctuation
13–15		Use conjunctive adverbs or phrases to show time relationships in simple narrative essays (e.g., <i>then</i> , <i>this time</i>)	Revise sentences to correct awkward and confusing arrangements of sentence elements Revise vague nouns and pronouns that create obvious logic problems	Use conjunctions or punctuation to join simple clauses Revise shifts in verb tense between simple clauses in a sentence or between simple adjoining sentences	Solve such basic grammatical problems as how to form the past and past participle of irregular but commonly used verbs and how to form comparative and superlative adjectives	Delete commas that create basic sense problems (e.g., between verb and direct object)
16–19	Identify the basic purpose or role of a specified phrase or sentence Delete a clause or sentence because it is obviously irrelevant to the essay	Select the most logical place to add a sentence in a paragraph	Delete obviously synonymous and wordy material in a sentence Revise expressions that deviate from the style of an essay	Determine the need for punctuation and conjunctions to avoid awkward-sounding sentence fragments and fused sentences Decide the appropriate verb tense and voice by considering the meaning of the entire sentence	Solve such grammatical problems as whether to use an adverb or adjective form, how to ensure straightforward subject-verb and pronoun-antecedent agreement, and which preposition to use in simple contexts Recognize and use the appropriate word in frequently confused pairs such as <i>there</i> and <i>their</i> , <i>past</i> and <i>passed</i> , and <i>led</i> and <i>lead</i>	Provide appropriate punctuation in straightforward situations (e.g., items in a series) Delete commas that disturb the sentence flow (e.g., between modifier and modified element)
20–23	Identify the central idea or main topic of a straightforward piece of writing Determine relevancy when presented with a variety of sentence-level details	Use conjunctive adverbs or phrases to express straightforward logical relationships (e.g., <i>first</i> , <i>afterward</i> , <i>in response</i>) Decide the most logical place to add a sentence in an essay Add a sentence that introduces a simple paragraph	Delete redundant material when information is repeated in different parts of speech (e.g., “alarmingly startled”) Use the word or phrase most consistent with the style and tone of a fairly straightforward essay Determine the clearest and most logical conjunction to link clauses	Recognize and correct marked disturbances of sentence flow and structure (e.g., participial phrase fragments, missing or incorrect relative pronouns, dangling or misplaced modifiers)	Use idiomatically appropriate prepositions, especially in combination with verbs (e.g., <i>long for</i> , <i>appeal to</i>) Ensure that a verb agrees with its subject when there is some text between the two	Use commas to set off simple parenthetical phrases Delete unnecessary commas when an incorrect reading of the sentence suggests a pause that should be punctuated (e.g., between verb and direct object clause)
24–27	Identify the focus of a simple essay, applying that knowledge to add a sentence that sharpens that focus or to determine if an essay has met a specified goal Delete material primarily because it disturbs the flow and development of the paragraph Add a sentence to accomplish a fairly straightforward purpose such as illustrating a given statement	Determine the need for conjunctive adverbs or phrases to create subtle logical connections between sentences (e.g., <i>therefore</i> , <i>however</i> , <i>in addition</i>) Rearrange the sentences in a fairly uncomplicated paragraph for the sake of logic Add a sentence to introduce or conclude the essay or to provide a transition between paragraphs when the essay is fairly straightforward	Revise a phrase that is redundant in terms of the meaning and logic of the entire sentence Identify and correct ambiguous pronoun references Use the word or phrase most appropriate in terms of the content of the sentence and tone of the essay	Revise to avoid faulty placement of phrases and faulty coordination and subordination of clauses in sentences with subtle structural problems Maintain consistent verb tense and pronoun person on the basis of the preceding clause or sentence	Ensure that a pronoun agrees with its antecedent when the two occur in separate clauses or sentences Identify the correct past and past participle forms of irregular and infrequently used verbs and form present-perfect verbs by using <i>have</i> rather than <i>of</i>	Use punctuation to set off complex parenthetical phrases Recognize and delete unnecessary commas based on a careful reading of a complicated sentence (e.g., between the elements of a compound subject or compound verb joined by <i>and</i>) Use apostrophes to indicate simple possessive nouns Recognize inappropriate uses of colons and semicolons
28–32	Apply an awareness of the focus and purpose of a fairly involved essay to determine the rhetorical effect and suitability of an existing phrase or sentence, or to determine the need to delete plausible but irrelevant material Add a sentence to accomplish a subtle rhetorical purpose such as to emphasize, to add supporting detail, or to express meaning through connotation	Make sophisticated distinctions concerning the logical use of conjunctive adverbs or phrases, particularly when signaling a shift between paragraphs Rearrange sentences to improve the logic and coherence of a complex paragraph Add a sentence to introduce or conclude a fairly complex paragraph	Correct redundant material that involves sophisticated vocabulary and sounds acceptable as conversational English (e.g., “an aesthetic viewpoint” versus “the outlook of an aesthetic viewpoint”) Correct vague and wordy or clumsy and confusing writing containing sophisticated language	Use sentence-combining techniques, effectively avoiding problematic comma splices, run-on sentences, and sentence fragments, especially in sentences containing compound subjects or verbs Maintain a consistent and logical use of verb tense and pronoun person on the basis of information in the paragraph or essay as a whole	Correctly use reflexive pronouns, the possessive pronouns <i>its</i> and <i>your</i> , and the relative pronouns <i>who</i> and <i>whom</i> Ensure that a verb agrees with its subject in unusual situations (e.g., when the subject-verb order is inverted or when the subject is an indefinite pronoun)	Use commas to set off a nonessential/nonrestrictive appositive or clause Deal with multiple punctuation problems (e.g., compound sentences containing unnecessary commas and phrases that may or may not be parenthetical) Use an apostrophe to show possession, especially with irregular plural nouns Use a semicolon to indicate a relationship between closely related independent clauses

College Readiness Standards — Mathematics

Score Range	Basic Operations & Applications	Probability, Statistics, & Data Analysis	Numbers: Concepts & Properties	Expressions, Equations, & Inequalities	Graphical Representations	Properties of Plane Figures	Measurement
13–15	<p>Perform one-operation computation with whole numbers and decimals</p> <p>Solve problems in one or two steps using whole numbers</p> <p>Perform common conversions (e.g., inches to feet or hours to minutes)</p>	<p>Calculate the average of a list of positive whole numbers</p> <p>Perform a single computation using information from a table or chart</p>	<p>Recognize equivalent fractions and fractions in lowest terms</p>	<p>Exhibit knowledge of basic expressions (e.g., identify an expression for a total as $b + g$)</p> <p>Solve equations in the form $x + a = b$, where a and b are whole numbers or decimals</p>	<p>Identify the location of a point with a positive coordinate on the number line</p>		<p>Estimate or calculate the length of a line segment based on other lengths given on a geometric figure</p>
16–19	<p>Solve routine one-step arithmetic problems (using whole numbers, fractions, and decimals) such as single-step percent</p> <p>Solve some routine two-step arithmetic problems</p>	<p>Calculate the average of a list of numbers</p> <p>Calculate the average, given the number of data values and the sum of the data values</p> <p>Read tables and graphs</p> <p>Perform computations on data from tables and graphs</p> <p>Use the relationship between the probability of an event and the probability of its complement</p>	<p>Recognize one-digit factors of a number</p> <p>Identify a digit's place value</p>	<p>Substitute whole numbers for unknown quantities to evaluate expressions</p> <p>Solve one-step equations having integer or decimal answers</p> <p>Combine like terms (e.g., $2x + 5x$)</p>	<p>Locate points on the number line and in the first quadrant</p>	<p>Exhibit some knowledge of the angles associated with parallel lines</p>	<p>Compute the perimeter of polygons when all side lengths are given</p> <p>Compute the area of rectangles when whole number dimensions are given</p>
20–23	<p>Solve routine two-step or three-step arithmetic problems involving concepts such as rate and proportion, tax added, percentage off, and computing with a given average</p>	<p>Calculate the missing data value, given the average and all data values but one</p> <p>Translate from one representation of data to another (e.g., a bar graph to a circle graph)</p> <p>Determine the probability of a simple event</p> <p>Exhibit knowledge of simple counting techniques</p>	<p>Exhibit knowledge of elementary number concepts including rounding, the ordering of decimals, pattern identification, absolute value, primes, and greatest common factor</p>	<p>Evaluate algebraic expressions by substituting integers for unknown quantities</p> <p>Add and subtract simple algebraic expressions</p> <p>Solve routine first-degree equations</p> <p>Perform straightforward word-to-symbol translations</p> <p>Multiply two binomials</p>	<p>Locate points in the coordinate plane</p> <p>Comprehend the concept of length on the number line</p> <p>Exhibit knowledge of slope</p>	<p>Find the measure of an angle using properties of parallel lines</p> <p>Exhibit knowledge of basic angle properties and special sums of angle measures (e.g., 90°, 180°, and 360°)</p>	<p>Compute the area and perimeter of triangles and rectangles in simple problems</p> <p>Use geometric formulas when all necessary information is given</p>
24–27	<p>Solve multistep arithmetic problems that involve planning or converting units of measure (e.g., feet per second to miles per hour)</p>	<p>Calculate the average, given the frequency counts of all the data values</p> <p>Manipulate data from tables and graphs</p> <p>Compute straightforward probabilities for common situations</p> <p>Use Venn diagrams in counting</p>	<p>Find and use the least common multiple</p> <p>Order fractions</p> <p>Work with numerical factors</p> <p>Work with scientific notation</p> <p>Work with squares and square roots of numbers</p> <p>Work problems involving positive integer exponents</p> <p>Work with cubes and cube roots of numbers</p> <p>Determine when an expression is undefined</p>	<p>Solve real-world problems using first-degree equations</p> <p>Write expressions, equations, or inequalities with a single variable for common pre-algebra settings (e.g., rate and distance problems and problems that can be solved by using proportions)</p> <p>Identify solutions to simple quadratic equations</p> <p>Add, subtract, and multiply polynomials</p> <p>Factor simple quadratics (e.g., the difference of squares and perfect square trinomials)</p> <p>Solve first-degree inequalities that do not require reversing the inequality sign</p>	<p>Identify the graph of a linear inequality on the number line</p> <p>Determine the slope of a line from points or equations</p> <p>Match linear graphs with their equations</p> <p>Find the midpoint of a line segment</p>	<p>Use several angle properties to find an unknown angle measure</p> <p>Recognize Pythagorean triples</p> <p>Use properties of isosceles triangles</p>	<p>Compute the area of triangles and rectangles when one or more additional simple steps are required</p> <p>Compute the area and circumference of circles after identifying necessary information</p> <p>Compute the perimeter of simple composite geometric figures with unknown side lengths</p>
28–32	<p>Solve word problems containing several rates, proportions, or percentages</p>	<p>Calculate or use a weighted average</p> <p>Interpret and use information from figures, tables, and graphs</p> <p>Apply counting techniques</p> <p>Compute a probability when the event and/or sample space are not given or obvious</p>	<p>Apply number properties involving prime factorization</p> <p>Apply number properties involving even/odd numbers and factors/multiples</p> <p>Apply number properties involving positive/negative numbers</p> <p>Apply rules of exponents</p>	<p>Manipulate expressions and equations</p> <p>Write expressions, equations, and inequalities for common algebra settings</p> <p>Solve linear inequalities that require reversing the inequality sign</p> <p>Solve absolute value equations</p> <p>Solve quadratic equations</p> <p>Find solutions to systems of linear equations</p>	<p>Interpret and use information from graphs in the coordinate plane</p> <p>Match number line graphs with solution sets of linear inequalities</p> <p>Use the distance formula</p> <p>Use properties of parallel and perpendicular lines to determine an equation of a line or coordinates of a point</p>	<p>Apply properties of 30°-60°-90°, 45°-45°-90°, similar, and congruent triangles</p> <p>Use the Pythagorean theorem</p>	<p>Use relationships involving area, perimeter, and volume of geometric figures to compute another measure</p>

College Readiness Standards — Reading

Score Range	Main Ideas and Author's Approach	Supporting Details	Sequential, Comparative, and Cause-Effect Relationships	Meanings of Words	Generalizations and Conclusions
13–15	Recognize a clear intent of an author or narrator in uncomplicated literary narratives	Locate basic facts (e.g., names, dates, events) clearly stated in a passage	Determine when (e.g., first, last, before, after) or if an event occurred in uncomplicated passages Recognize clear cause-effect relationships described within a single sentence in a passage	Understand the implication of a familiar word or phrase and of simple descriptive language	Draw simple generalizations and conclusions about the main characters in uncomplicated literary narratives
16–19	Identify a clear main idea or purpose of straightforward paragraphs in uncomplicated literary narratives	Locate simple details at the sentence and paragraph level in uncomplicated passages Recognize a clear function of a part of an uncomplicated passage	Identify relationships between main characters in uncomplicated literary narratives Recognize clear cause-effect relationships within a single paragraph in uncomplicated literary narratives	Use context to understand basic figurative language	Draw simple generalizations and conclusions about people, ideas, and so on in uncomplicated passages
20–23	Infer the main idea or purpose of straightforward paragraphs in uncomplicated literary narratives Understand the overall approach taken by an author or narrator (e.g., point of view, kinds of evidence used) in uncomplicated passages	Locate important details in uncomplicated passages Make simple inferences about how details are used in passages	Order simple sequences of events in uncomplicated literary narratives Identify clear relationships between people, ideas, and so on in uncomplicated passages Identify clear cause-effect relationships in uncomplicated passages	Use context to determine the appropriate meaning of some figurative and nonfigurative words, phrases, and statements in uncomplicated passages	Draw generalizations and conclusions about people, ideas, and so on in uncomplicated passages Draw simple generalizations and conclusions using details that support the main points of more challenging passages
24–27	Identify a clear main idea or purpose of any paragraph or paragraphs in uncomplicated passages Infer the main idea or purpose of straightforward paragraphs in more challenging passages Summarize basic events and ideas in more challenging passages Understand the overall approach taken by an author or narrator (e.g., point of view, kinds of evidence used) in more challenging passages	Locate important details in more challenging passages Locate and interpret minor or subtly stated details in uncomplicated passages Discern which details, though they may appear in different sections throughout a passage, support important points in more challenging passages	Order sequences of events in uncomplicated passages Understand relationships between people, ideas, and so on in uncomplicated passages Identify clear relationships between characters, ideas, and so on in more challenging literary narratives Understand implied or subtly stated cause-effect relationships in uncomplicated passages Identify clear cause-effect relationships in more challenging passages	Use context to determine the appropriate meaning of virtually any word, phrase, or statement in uncomplicated passages Use context to determine the appropriate meaning of some figurative and nonfigurative words, phrases, and statements in more challenging passages	Draw subtle generalizations and conclusions about characters, ideas, and so on in uncomplicated literary narratives Draw generalizations and conclusions about people, ideas, and so on in more challenging passages
28–32	Infer the main idea or purpose of more challenging passages or their paragraphs Summarize events and ideas in virtually any passage Understand the overall approach taken by an author or narrator (e.g., point of view, kinds of evidence used) in virtually any passage	Locate and interpret minor or subtly stated details in more challenging passages Use details from different sections of some complex informational passages to support a specific point or argument	Order sequences of events in more challenging passages Understand the dynamics between people, ideas, and so on in more challenging passages Understand implied or subtly stated cause-effect relationships in more challenging passages	Determine the appropriate meaning of words, phrases, or statements from figurative or somewhat technical contexts	Use information from one or more sections of a more challenging passage to draw generalizations and conclusions about people, ideas, and so on

Descriptions of the PLAN Reading Passages

Uncomplicated Literary Narratives refers to excerpts from essays, short stories, and novels that tend to use simple language and structure, have a clear purpose and a familiar style, present straightforward interactions between characters, and employ only a limited number of literary devices such as metaphor, simile, or hyperbole.

More Challenging Literary Narratives refers to excerpts from essays, short stories, and novels that tend to make moderate use of figurative language, have a more intricate structure and messages conveyed with some subtlety, and may feature somewhat complex interactions between characters.

Complex Literary Narratives refers to excerpts from essays, short stories, and novels that tend to make generous use of ambiguous language and literary devices, feature complex and subtle interactions between characters, often contain challenging context-dependent vocabulary, and typically contain messages and/or meanings that are not explicit but are embedded in the passage.

Uncomplicated Informational Passages refers to materials that tend to contain a limited amount of data, address basic concepts using familiar language and conventional organizational patterns, have a clear purpose, and are written to be accessible.

More Challenging Informational Passages refers to materials that tend to present concepts that are not always stated explicitly and that are accompanied or illustrated by more—and more detailed—supporting data, include some difficult context-dependent words, and are written in a somewhat more demanding and less accessible style.

Complex Informational Passages refers to materials that tend to include a sizable amount of data, present difficult concepts that are embedded (not explicit) in the text, use demanding words and phrases whose meaning must be determined from context, and are likely to include intricate explanations of processes or events.

College Readiness Standards — Science

Score Range	Interpretation of Data	Scientific Investigation	Evaluation of Models, Inferences, and Experimental Results
13–15	<p>Select a single piece of data (numerical or nonnumerical) from a simple data presentation (e.g., a table or graph with two or three variables; a food web diagram)</p> <p>Identify basic features of a table, graph, or diagram (e.g., headings, units of measurement, axis labels)</p>		
16–19	<p>Select two or more pieces of data from a simple data presentation</p> <p>Understand basic scientific terminology</p> <p>Find basic information in a brief body of text</p> <p>Determine how the value of one variable changes as the value of another variable changes in a simple data presentation</p>	<p>Understand the methods and tools used in a simple experiment</p>	
20–23	<p>Select data from a complex data presentation (e.g., a table or graph with more than three variables; a phase diagram)</p> <p>Compare or combine data from a simple data presentation (e.g., order or sum data from a table)</p> <p>Translate information into a table, graph, or diagram</p>	<p>Understand the methods and tools used in a moderately complex experiment</p> <p>Understand a simple experimental design</p> <p>Identify a control in an experiment</p> <p>Identify similarities and differences between experiments</p>	<p>Select a simple hypothesis, prediction, or conclusion that is supported by a data presentation or a model</p> <p>Identify key issues or assumptions in a model</p>
24–27	<p>Compare or combine data from two or more simple data presentations (e.g., categorize data from a table using a scale from another table)</p> <p>Compare or combine data from a complex data presentation</p> <p>Interpolate between data points in a table or graph</p> <p>Determine how the value of one variable changes as the value of another variable changes in a complex data presentation</p> <p>Identify and/or use a simple (e.g., linear) mathematical relationship between data</p> <p>Analyze given information when presented with new, simple information</p>	<p>Understand the methods and tools used in a complex experiment</p> <p>Understand a complex experimental design</p> <p>Predict the results of an additional trial or measurement in an experiment</p> <p>Determine the experimental conditions that would produce specified results</p>	<p>Select a simple hypothesis, prediction, or conclusion that is supported by two or more data presentations or models</p> <p>Determine whether given information supports or contradicts a simple hypothesis or conclusion, and why</p> <p>Identify strengths and weaknesses in one or more models</p> <p>Identify similarities and differences between models</p> <p>Determine which model(s) is(are) supported or weakened by new information</p> <p>Select a data presentation or a model that supports or contradicts a hypothesis, prediction, or conclusion</p>
28–32	<p>Compare or combine data from a simple data presentation with data from a complex data presentation</p> <p>Identify and/or use a complex (e.g., nonlinear) mathematical relationship between data</p> <p>Extrapolate from data points in a table or graph</p>	<p>Determine the hypothesis for an experiment</p> <p>Identify an alternate method for testing a hypothesis</p>	<p>Select a complex hypothesis, prediction, or conclusion that is supported by a data presentation or model</p> <p>Determine whether new information supports or weakens a model, and why</p> <p>Use new information to make a prediction based on a model</p>

Science College Readiness Standards are measured in the context of science topics students encounter in science courses. These topics may include:

Life Science/Biology	Physical Science/Chemistry, Physics	Earth & Space Science
<ul style="list-style-type: none"> Animal behavior Animal development and growth Body systems Cell structure and processes Ecology Evolution Genetics Homeostasis Life cycles Molecular basis of heredity Origin of life Photosynthesis Plant development, growth, structure Populations Taxonomy 	<ul style="list-style-type: none"> Atomic structure Chemical bonding, equations, nomenclature, reactions Electrical circuits Elements, compounds, mixtures Force and motions Gravitation Heat and work Kinetic and potential energy Magnetism Momentum The Periodic Table Properties of solutions Sound and light States, classes, and properties of matter Waves 	<ul style="list-style-type: none"> Earthquakes and volcanoes Earth's atmosphere Earth's resources Fossils and geological time Geochemical cycles Groundwater Lakes, rivers, oceans Mass movements Plate tectonics Rocks, minerals Solar system Stars, galaxies, and the universe Water cycle Weather and climate Weathering and erosion

GLOSSARY OF TERMS

Abbreviations

— (dash)	Data not available
Alg	Pre-Algebra/Algebra
COMP	Composite score—the average of the four PLAN test scores
CP	Cumulative Percent
Eng	English
For Lang	Foreign Language
Freq	Frequencies
Geom	Geometry
L or Local	School, district, or other group for which data is reported
Math	Mathematics
N (Roster)	National norm group
N (Summary Report)	Number of students
NA	Information not available
Nat Sci	Natural Sciences
Nat'l	National norm group
Read	Reading
Rhet Skills	Rhetorical Skills
Sci	Science
SD	Standard deviation
Soc Std	Social Studies
Total N	Total number of examinees in group
U/M	Usage/Mechanics

GENERAL TERMS

Core: A typical college-preparatory curriculum including a minimum number of years of study in the subject areas listed below. Similar preparation may be helpful to students entering other training or preparation programs after high school.

- **English—4 years or more**
- **Mathematics—3 years or more**
- **Social Studies—3 years or more**
- **Natural Sciences—3 years or more**

STATISTICAL TERMS

Mean (Average): The arithmetical sum of a set of scores divided by the total number of scores.

N, N-Count: Number of students. Typically, this refers to the number of student records on which a particular table or data element is based.

Percent: The number of students who gave a certain response, or who obtained a certain scale score, divided by the total number of students, multiplied by 100.

Cumulative Percent (CP): A number used to describe the standing of an individual relative to a defined group. If an examinee with a score of 16 has a CP of 73, it means that 73% of the examinees in the norm group received a score of 16 or lower, or that the student scored the same as or better than 73% of the students in the norm group.

Standard Deviation (SD): The amount of variability (spread) of scores present in a specified group. The greater the spread in scores, the larger the standard deviation.

Scale Scores: Scores equated across test forms to adjust for differences in test difficulty and to ensure comparability of scores across different forms of the PLAN tests. An examinee's raw score is obtained by counting the number of items he/she answered correctly. The raw score is then converted to a scale score.
